PROFILE

A First Class computer science gradute seeking a career in AI and Data Science. Skilled in Python and SQL with hands-on experience of developing a mental health application using CNN and implementing AI technologies. Currently contributing to a generative manufacturing project powered by AI while learning more about vector databases, RAG and LLM through courses and personal projects.

EDUCATION

Spt 2023 - Jun 2025 — BSc Computer Science, The University of the West of England — Bristol

Graduted with **First Class Honors**

Sept 2022 - May 2023 — International Year One in Computing, The University of the West of England, International College — Bristol

91% Overall, Pass with **Distiction**

ACADEMIC PROJECTS

Sept 2024 - Jan 2025 **Autonomous Agents & Path Planning Simulation**

- Worked on a multi-agent robotic farming simulation using **Mesa** framework in **Python**.
- Implemented A* search algorithm to optimise robot movement and improve system efficiency.
- Built a dynamic environment, multi-agent interactions, and KPI-based performance results.
- Created a professional documentation on how the agents function, including analysis on how the agents improved via integrating the search algorithm

Sept 2024 - Dec 2025 **Cybersecurity Data Analysis**

- Conducted cybersecurity investigations into network breaches, malware categorisation, and insider risks.
- Examined system logs and network traffic using **scikit-learn**, **Pandas**, and **Python**.
- Utilised visualisations and network graphs with **Matplotlib**, **Seaborn**, and **NetworkX** to identify unusual activity.
- Used **Jupyter Notebook** to deliver data-driven security insights

Sept 2024 - Apr 2025 **Mental Health Monitoring Application with AI Integration**

- Developed a web-based facial expression recognition system for mental health monitoring using **Agile Scrum** practices.
- Built web interface with **Streamlit** (Python) for visualisation and user interaction.
- Implemented a Convolutional Neural Network **(CNN)** using **PyTorch** for emotion classification. • Utilised **OpenCV** (Python) for real-time face detection and image preprocessing.
- Handled the FER-2013 dataset using Python for model training and evaluation, and **PostgreSQL** (SQL) for data storage and management.
- Applied strong time management and planning skills to meet project deadlines and document progress using **MS Office tools**, and designed the GUI using **Figma**.
- Presented the final product, demonstrating data analysis, research skills, evidence-based conclusions, and clear presentation skills

Sept 2024 - May 2025 **Uni Hub Social Media**

- Collaborated in a team of 5 to design and develop a full-stack web platform for university students, using **Agile** practices and **Jira** for sprint tracking and task management.
- Built front end using **React 18** (React 18, React Router, Tailwind CSS, shadcn).

- Designed and implemented back-end using **Django** 5 and Django REST Framework, with PostgreSQL as the database.
- Implemented authentication system using Django Sessions and Microsoft Login.
- Combined a FastAPI microservice with a pre-trained **BERT** model for spam detection.
- Managed media storage with **Amazon S3** and handled background tasks using **Celery** and **Redis**.
- Used **Docker** to containerise frontend, backend and micro services.
- Presented the project results, showcasing strong communication, teamwork and presentation skills.

Jan 2024 - May 2024 **Critical Care Unit System**

- Collaborated in a 5-member **Agile Scrum** team to develop a healthcare management system, strengthening communication and teamwork skills.
- Organised and tracked development tasks across the team, managing follow-ups to keep implementation on schedule.
- Led back-end development and API creation using **Python** and **Flask**, including system testing.
- Built the front end using **HTML**, **CSS**, **JavaScript**, and **Electron** for desktop functionality
- Implemented data analytics and machine learning components in Python for patient monitoring, data analysis, and outcome prediction.

TECHNICAL SKILLS

Python
C/C++
JavaScript
SQL/NoSQL
HMTL
CSS
MS Office (Excel, PowerPoint, Word)

EMPLOYMENT HISTORY

Aug 2024 - Jun 2025 PAL Leader for UWEBIC IYO Computing, UWE University Library, Careers and Inclusivity – Library Services – PAL Bristol

- Facilitated mentoring sessions in computing, supporting peers' learning and technical problem-solving.
- Developed leadership and communication skills while guiding students in projects and coursework

Feb 2019 - Aug 2022 Customer Services Assistant, Anadolija Transport Istanbul

- Received and managed customer inquiries throught phone calls and emails, resolved logistics issues and provided delivery updates.
- Coordinated with logistic team to improve efficiency, data reporting, and customer satisfaction.
- Used MS Office products (Excel, PowerPoint, Word) for tracking, analysis, and reporting.

Sept 2024 - May 2025 Retail Volunteer, Barnado's Charity Shop Bristol

- Assisted with stock organisation, sales, and fundraising events.
- Developed teamwork, interpersonal skills, and attention to detail in a work environment.

HOBBIES

- Learning Emerging Technologies – Continuously exploring cloud, frameworks, trends in software and AI.
- Mentoring & Peer Support – Passionate about guiding others and sharing knowledge, particularly in technical subjects.
- Creative Culinary & DIY Enthusiast - Passionate about experimenting with recipes and cooking as a creative outlet, while also enjoying hands-on DIY projects, from tech setups to home tasks.
